PRODUCT DESCRIPTION

DuoDERM CGF Border Dressing is a hydrocolloid dressing consisting of an inner (wound contact) layer of hydrocolloids contained within an adhesive polymer matrix and an outer layer of polyurethane foam. The dressing provides a moist wound environment that favors the healing process by aiding autolytic debridement, facilitating the migration of epithelial cells, and allowing non-traumatic removal of the dressing without damaging newly formed tissue. The dressing may be used as a primary or secondary dressing in combination with other wound dressings. The adhesive layer contains elastomeric polymers which enhance the dressing's ability to contain wound exudate by forming a cohesive gel.

INDICATIONS

Chronic Wounds - Dermal Ulcers (including full thickness wounds), Pressure Ulcers (Stage I - IV), Leg Ulcers.

Acute Wounds - Superficial Wounds (e.g. Minor Abrasions), Second Degree Burns, Donor Sites.

CONTRAINDICATION

Not intended for use on patients with known sensitivity to the dressing or its components.

PRECAUTIONS AND OBSERVATIONS

This device is for single-use only and should not be re-used. Re-use may lead to increased risk of infection or cross contamination. Physical properties of the device may no longer be optimal for intended use.

1) Appropriate supportive measures should be taken where indicated (e.g., use of graduated compression bandaging in the management of venous leg ulcers, or pressure relief measures in the management of pressure ulcers). 2) The autolytic debriding environment produced by the dressing may result in the wound appearing larger after the first few dressing changes. 3) Colonization of chronic wounds is common and is not a contraindication to the use of the dressing. The dressing may be used on infected wounds under medical supervision together with appropriate therapy and frequent monitoring of the wound. In the presence of a clinical anaerobic infection, occlusive therapy is not recommended. 4) Rarely, irritation and/or maceration of the skin, hypergranulation and allergic reactions have been reported. 5) Frequent dressing changes on wounds with compromised peri-ulcer skin is not recommended.

APPLYING DUODERM CGF BORDER DRESSING

APPLY A DRESSING THAT EXTENDS 3 CM BEYOND WOUND

Cleanse the wound site, rinse well and dry the surrounding skin. Note: As wound exudate is absorbed by the dressing, gel formation may be visible as a bubble on the outer surface of the dressing.

- Remove top backing paper *only*. NOTE: The triangle shaped dressing can be applied in several directions depending on the location of the ulcer. In sacral ulcers, the dressing may be folded in half lengthwise to make it easy to apply in the sacral folds.
- Apply the dressing over the wound. Mold dressing into place with hand for secure adhesion around wound margins.
- Fold back the border and remove the release papers from the border adhesive; press the borders into place.

REMOVAL OF THE DRESSING

- Press down on the skin with one hand and carefully lift an edge of the dressing with your other hand. Maximum recommended wear time is up to seven days.

Maximum recommended wear time is up to seven days.

STORAGE PRECAUTIONS

Store at room temperature. Keep dry. Avoid refrigeration and exposure to high humidity.

This product is supplied sterile.
